

# The Easy "How Much Do You Need" Worksheet

## 1. Calculate Square Footage

Height in Feet x Length in Feet = Square Footage

## 2. Determine the Depth You Need

*Recommended Depths:*

Compost or Soil: 3-4"

Mulch: 3-4"

¾" Rock or Sand: 2-3"

1½" Rock: 3"

Cobble: 1 ton covers 60 sq ft

**Padilla All Season Services**

Lawn Care & Grounds Maintenance

## 3. Calculate!

Put the Sq. Footage you got from Step 1 in the equation below (A.) to calculate how much you need.

### Mulch, Compost or Soil:

$$\frac{\text{A.}}{300} = \boxed{\phantom{000}} \\ \text{Cubic Yards Needed}$$

$$\frac{\text{A.}}{150} = \boxed{\phantom{000}} \\ \text{Cubic Yards Needed}$$

$$\frac{\text{A.}}{100} = \boxed{\phantom{000}} \\ \text{Cubic Yards Needed}$$

$$\frac{\text{A.}}{75} = \boxed{\phantom{000}} \\ \text{Cubic Yards Needed}$$

### Rock or Sand:

$$\frac{\text{A.}}{105} = \boxed{\phantom{000}} \\ \text{Tons Needed}$$

$$\frac{\text{A.}}{80} = \boxed{\phantom{000}} \\ \text{Tons Needed}$$
